

Multi-Level Election Archive (MLEA) Codebook

Variable	Definition and notes	Source
<i>data_source</i>	Name of original data source from which we obtained election result information	Coded by authors
<i>id</i>	Numeric value identifying each unique office-district in MLEA. If two elective offices have identical districts (e.g., Senate and Gubernatorial elections in the US) they are assigned unique district identifiers. The term “district fixed-effects” thus refers to office-district fixed-effects. This variable is constructed with three pieces of information: country, office type, and district. In order to keep the id constant for districts that have multiple years of election data we use either uniquely identifying district codes or, if those are unavailable, district names from the original data source. Formula: Banks*1000000 + election_type*100000 + polity_name (encoded)	Coded by authors
<i>elecno</i>	Elections for each district-office ordered 1, 2, etc.	Coded by authors
<i>Country</i>	Country name	Coded by authors
<i>Banks</i>	Numeric country code	World Bank
<i>election_type</i>	Numeric value given to each type of office: 1=national executive 2/3=national lower/upper 4= region executive 5/6= region lower/upper 7/8=local executive/legislative	Coded by authors
<i>polity_name</i>	District name	See “data_source”
<i>time</i>	Election year and month Formula: year*100 + month	Coded by authors
<i>year</i>	Election year	See “data_source”
<i>month</i>	Election month; 1 if unknown	Coded by authors
<i>mn</i>	Election month; missing if unknown	See “data_source”
<i>comp_largest</i>	100 – vote share of the largest party	Coded by authors
<i>electorate_ln</i>	Electorate, transformed by the natural logarithm (the benchmark measure).	Coded by authors
<i>electorate</i>	The number of eligible voters in a district. If unavailable, this may be proxied by the population of the district in time-periods when suffrage is universal.	See “data_source”
<i>ballots_or_votes</i>	The number of ballots or votes received in an election	See “data_source”
<i>pop_type</i>	A variable indicating the best type of voter-related data available, ranked this way: “eligible voters” = best “population” “ballots cast”	Coded by authors

	"valid votes" = worst	
<i>secret</i>	Coded 1 if ballot is secret. 0 otherwise	Przeworski (2013)
<i>maj1</i>	Coded 1 if electoral system is majoritarian with block ballot	Colomer et al. (2006)
<i>maj2</i>	Coded 1 if electoral system is majoritarian with cumulative ballot. These multi-member districts allow voters to cast multiple votes for one or more candidates	Colomer et al. (2006)
<i>maj3</i>	Single member districts	Colomer et al. (2006)
<i>pr1</i>	Coded 1 if electoral system is proportional with mean district magnitude less than 9	Colomer et al. (2006)
<i>pr2</i>	Coded 1 if electoral system is proportional with mean district magnitude greater than 9 and closed lists	Colomer et al. (2006)
<i>pr3</i>	Coded 1 if electoral system is proportional with mean district magnitude greater than 9 and open lists	Colomer et al. (2006)
<i>mix</i>	Coded 1 if electoral system includes parallel SMD and MMD seats (with or without compensation for disproportionality induced by SMD elections) and data sources do not allow us to determine which districts are SMD	Colomer et al. (2006)
<i>ind</i>	Indirect elections	Colomer et al. (2006)
<i>comp_largest_L</i>	100 – vote share of the largest party in the previous election (lagged dependent variable)	Coded by authors
<i>pev_change</i>	Electorate recoded as first-difference	Coded by authors
<i>pev_more</i>	Amplitude of positive change in electorate (ln), 0 if negative	Coded by authors
<i>pev_less</i>	Amplitude of negative change in electorate (ln), 0 if positive	Coded by authors
<i>dm_ln</i>	The number of positions contested, transformed by the natural logarithm	Coded by authors
<i>mag</i>	The number of positions contested	See "data_source"
<i>OECD</i>	Coded 1 if Country was part of the OECD before 1990, 0 if otherwise	Organisation for Economic Cooperation and Development (http://www.oecd.org/about/membersandpartners/list-oecd-member-countries.htm)
<i>Polity4_imp</i>	The POLITY2 variable, which reflects the extent of democracy and autocracy in a country; ranges from -10 to +10	(Marshall, Gurr & Jagers 2013)
<i>bottomtiername</i>	Name of bottom tier unit in which the district (ward) resides. Note: Local UK elections occur at the level of wards, which elect members to various tiers of government.	Rallings, Thrasher & Ware (2006)
<i>Brazil_state</i>	Name of Brazilian state in which the district (state or municipality) resides.	Brambor and Ceneviva (2012), Brazilian Institute of Geography and Statistics (Instituto Brasileiro de Geografia e Estatística)
<i>round</i>	Coded 2 if the second of two rounds, 1 if otherwise	See "data_source"

<i>urban_perc</i>	Proportion of population that is urban	US Census, Brambor and Ceneviva (2012), Brazilian Institute of Geography and Statistics (Instituto Brasileiro de Geografia e Estatística)
<i>incomepc_ln</i>	Personal income per capita, transformed by the natural logarithm	US Bureau of Economic Analysis, Brambor and Ceneviva (2012), Brazilian Institute of Geography and Statistics (Instituto Brasileiro de Geografia e Estatística)
<i>literacy</i>	% of population that is literate	Brambor and Ceneviva (2012), Brazilian Institute of Geography and Statistics (Instituto Brasileiro de Geografia e Estatística)
<i>universal_suffrage</i>	Coded 0 until universal adult suffrage is established, 1 thereafter. Coded 0 if female and male suffrage are introduced separately	Coded by authors based on Przeworski (2013)
<i>female_suffrage</i>	Coded 0 until universal female adult suffrage is established, 1 thereafter. Coded 0 if female and male suffrage are introduced simultaneously	Coded by authors based on Przeworski (2013)
<i>youth_suffrage</i>	Coded 0 until suffrage is extended to youth (variously defined between the ages of 18-25), 1 thereafter. If there is more than one episode of youth suffrage extension in a country's history, the largest such extension is regarded as the treatment and other episodes are ignored	Coded by authors based on Przeworski (2013)
<i>comp_incumb</i>	100 – vote share of the incumbent party (i.e., the party with the largest vote share in the previous election)	Coded by authors
<i>comp_diff</i>	100 – the difference between the two parties with the top two vote shares	Coded by authors
<i>turnover</i>	1 if change in party control, 0 if otherwise (applies only to SMDs)	Coded by authors
<i>comp_largest_binary</i>	Coded 0 if one party obtained all of the votes, 1 if otherwise	Coded by authors
<i>electorate_ln2</i>	Electorate, transformed by the natural logarithm and then squared	Coded by authors
<i>land_area_ln</i>	Land area in square kilometers, transformed by the natural logarithm	Brambor and Ceneviva (2012), Brazilian Institute of Geography and Statistics (Instituto Brasileiro de Geografia e Estatística)
<i>area_sqm_ln</i>	Land area in square miles, transformed by the natural logarithm	US National Atlas (http://www.nationalatlas.gov/articles/mapping/a_general.html)
<i>college</i>	% of people 25 and older who have a bachelor's degree	US Census
<i>highschool</i>	% of people 25 and older who have a high school degree	US Census
<i>US_state</i>	FIPS code for US state in which the district (state, city council ward, etc.) resides.	US Census
<i>share1</i>	Vote share of the largest vote-getting party	See "data_source"
<i>party1</i>	Numeric code for the largest vote-getting party	See "data_source"

<i>party1_name</i>	Name of the largest vote-getting party	See "data_source"
<i>share2</i>	Vote share of the second largest vote-getting party	See "data_source"
<i>party2</i>	Numeric code for the second largest vote-getting party	See "data_source"
<i>party2_name</i>	Name of the second largest vote-getting party	See "data_source"
<i>share_incumb</i>	Vote share of the incumbent party (i.e., the party with the largest vote share in the previous election)	See "data_source"
<i>party_incumb</i>	Numeric code for the incumbent party	See "data_source"
<i>party_incumb_name</i>	Name of the incumbent party	See "data_source"
<i>turnout</i>	Percent of eligible voters who voted	See "data_source"
<i>comp_incumbdiff</i>	100 – (the vote share of the incumbent party minus that of the non-incumbent party with the highest vote share)	Coded by authors
<i>comp_incumbdiff2</i>	100 – (the vote share of the incumbent party minus that of the non-incumbent party with the highest vote share), capped at 100	Coded by authors
<i>turnover_broad</i>	1 if change in party control, 0 if otherwise (coded even if not SMD)	Coded by authors
<i>elec</i>	Total number of electors in an indirect election	Constituency-Level Elections Archive (Kollman et al. 2011)
<i>ev</i>	Number of electors won by the winning party in an indirect election	Constituency-Level Elections Archive (Kollman et al. 2011)
<i>f</i>	Qualifications of the right to vote in national elections; the first digit reflects the extent of male suffrage (0=none, 7=nearly all), and the second digit reflects whether women are qualified on an equal basis (=2), more narrow basis (=1), or cannot vote (=no second digit)	Przeworski (2013)
<i>ext_type</i>	Type of franchise extension during that year, in national elections 0=none 1=by class (i.e. the first digit of "f" rose) 2=by gender (i.e. the second digit of "f" rose) 3=by class and gender (i.e. both digits of "f" rose)	Przeworski (2013)
<i>oth_exclusions</i>	Captures other franchise exclusions in national elections not reflected by the variable "f"	Przeworski (2013)
<i>franchise_age</i>	Minimum voting age in national elections	Przeworski (2013)
<i>compulsory</i>	1 if voting in any national elections is compulsory	Przeworski (2013)
<i>eligible_pr</i>	Ratio of the number of people eligible to vote to the total population of the country	Przeworski (2013)
<i>legpart_pr</i>	Ratio of voters in legislative elections to the total population of the country	Przeworski (2013)
<i>prespart_pr</i>	Ratio of voters in presidential elections to the total population of the country	Przeworski (2013)
<i>participation_f</i>	Participation ratio for legislative or presidential elections divided by the eligibility ratio	Przeworski (2013)
<i>male_suffrage</i>	Coded 0 until universal male adult suffrage is established, 1 thereafter. Coded 0 if female and male suffrage are introduced simultaneously	Coded by authors based on Przeworski (2013)

<i>bottomtiertype</i>	Type of bottom tier council to which the UK official was elected	Rallings, Thrasher & Ware (2006)
<i>toptieradministrator</i>	Coded 1 if UK official was elected to a top tier council, 0 otherwise	Rallings, Thrasher & Ware (2006)
<i>toptiername</i>	Name of top tier unit in which the district (ward) resides.	Rallings, Thrasher & Ware (2006)
<i>countyname</i>	Name of the county in which the district (ward) resides	Rallings, Thrasher & Ware (2006)
<i>council_electorate</i>	The number of eligible voters in all wards of the council to which the UK official was elected	Rallings, Thrasher & Ware (2006)
<i>regionname</i>	Name of the region (e.g. Scotland) in which the district (ward) resides	Rallings, Thrasher & Ware (2006)
<i>candidateincumbent</i>	Coded 1 if candidate was an incumbent, 0 otherwise	Rallings, Thrasher & Ware (2006)
<i>wardname</i>	Name of the ward, i.e. the level at which people elect UK officials to bottom and top tier councils	Rallings, Thrasher & Ware (2006)
<i>US_state_pop</i>	Population of the state in which the district resides	US Census
<i>US_seats</i>	Number of US House of Representative seats currently apportioned to the state in which the district resides	US Census
<i>US_state_abb</i>	Two-letter abbreviation for the state in which the district resides	US Census

Note: Highlighted variables are not used in the analyses.
